Lakeland, FL, US

Senior Full Stack Software Developer with 5 years of experience building enterprise web applications in Angular and .NET. Lead a 5-person front-end team, with a record of measurable performance and delivery gains.

Work Experience

John J Jerue, Companies | Lakeland, FL

Lead front-end developer for a 5-person team and share ownership of backend architecture decisions

Senior Full Stack Software Developer

Feb 2025 – Present

- Own every Angular upgrade through v22 and lead the migration to standalone components, signals, OnPush ahead of Zone.js removal
- Rearchitected backend request handling for branch management's credit, cutting response times 50-98% (worst case 5360ms → 95ms, 56x), and led the sync-to-async backend migration
- Cut CI/CD pipeline time 66% (18 min to 6 min) by redesigning Azure DevOps YAML pipelines
- Led a location-tracking schema redesign and data migration, soft-deleting 22M+ obsolete records (~70% of the table) and saving ~30 GB of storage upon full deletion of records
- Built a passwordless customer portal where external clients enter orders and track them with documents and tracking details, and migrated authentication from Keycloak to Auth0
- Designed and shipped a configurable margin-target system with real time margin calculation by branch, agent, customer, or carrier
- Built the Highway integration for loadboards, tracking and fraud alerts, and currently developing broker/carrier rate negotiation on top of it

Full Stack Software Developer

May 2023 – Jan 2025

- Completed the production cutover from AngularJS to Angular 10 (Sep 2023), then upgraded through Angular 17 on a six-month cadence keeping the app one version behind the latest release
- Built a silent/forced update system tied into the deployment pipeline to stop users running stale cached builds, eliminating version mismatch support tickets and lost-in-progress input
- Built a Nearby Load/Order feature that surfaces loads and orders within 24 hours and 50 miles of the one being viewed

Junior Software Developer

Jan 2022 – Apr 2023

- Built the front end of a passwordless carrier payment portal (QR code or load number + PIN access); adopted by nearly all carriers, saving office staff ~2 hours daily on payment-status calls
- Migrated 26+ domain modules from AngularJS to Angular 10 as part of a full-application rewrite, refactoring and removing legacy code to eliminate tech debt across a large, complex codebase
- Resolved 360+ defects and behavioral differences across the legacy and new applications during a feature freeze, driving feature parity ahead of the production cutover

Skills

Languages: C#, TypeScript, JavaScript, HTML, SASS/CSS, SQL

Frameworks and Libraries: Angular (Material, Kendo), .NET, SignalR, RabbitMQ, Coravel

Infrastructure and tools: Redis, Azure DevOps (CI/CD, YAML), Auth0, Sentry, Git

Practices: System Design, Performance Optimization, API Design, Technical Leadership

Education

Florida Southern College

May 2023

Bachelor of Science *Computer Science*
